***Information Disclosure Statement***

The information disclosure statements filed November 01, 2002 and November 06, 2002 have been considered and have been made of record.

***Obviousness-type Double Patenting Rejection***

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-41 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-29 of U.S. Patent No. 6,498,224. Although the conflicting claims are not identical, they are not patentably distinct from each other because the instantly claimed method for the synthesis of an activated bisimide, the methods for the synthesis of polyetherimides and the method for the synthesis of an activated 4-halophthalimide is viewed as being encompassed by the patent's methods for the synthesis of poly(etherimide)s comprising transimidation of bis(imide) (IV) in the presence of a substituted phthalic anhydride or 4-substituted tetrahydrophthalic anhydride to yield dianhydride (V) which may be reacted, recycled or converted to 4-substituted n-alkyl phthalimide for use in the formation bisimide (IV)

obviating the need for a nitration step; since both are claiming overlapping reactants and process conditions.

**Prior Art**

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. These references are cited to show the state of the art of preparing copolyimide and polyamic acid, bisimide containing heterocyclic aromatic rings, and slurry preparation of bis(halophthalimides) and polyether polymer; Khouri, Webb, Takekoshi and Odle.
